

COUNCILS **CANNOT** reduce Queensland's **Waste footprint** ALONE

Six-Point Plan:

1. **Tailored LOCAL SOLUTIONS**

Solutions must be local and achievable. Waste management and recycling look very different in a big city to a regional town.

As the ones on the ground collecting rubbish and providing the services, councils have unrivalled insight into what Queenslanders need.

2. **SUPPORT THE BIG Facilities We Need**

Big reductions in waste require a big investment in infrastructure. Councils are calling for an audit of gaps, and a clear investment plan from the State – that matches recycling targets.

3. **INVEST in education**

Behaviour change takes time and money. Think how the 'slip, slop, slap' campaign protected our skin over decades – we need a behaviour change campaign for waste.

4. **SUPPORT TO BUILD Markets**

Incentives to support and increase markets like **organics** and **recyclables**. This includes logistics, like funding for transport to take rubbish to end markets – especially in such a decentralised state as Queensland.

5. **HOLD Producers to account**

Stop waste at the start. Councils want standards for producers to help manage problem waste streams, like tyres that clog up our landfill and continue to harm our environment.

6. **Get on With the JOB**

Less red tape means quicker information for councils and faster action.

#Bin THE TAX
IT'S RUBBISH.

Councils are calling for real solutions.
